

Standing Requirements

## Outcomes Library

### BA/BS in Science Education Outcome Set

#### 1. Content

Teachers of science understand and can articulate the knowledge and practices of contemporary science. They can interrelate and interpret important concepts, ideas, and applications in their fields of licensure; and can conduct scientific investigations. To show that they are prepared in content, teachers of science must demonstrate that they:

Outcome	Mapping
1(a) understand major concepts, principles, theories, laws, and interrelationships understand and can successfully convey to students the major concepts, principles, theories, laws, and interrelationships of their fields of licensure and supporting fields as recommended by the National Science Teachers Association	No Mapping
1(b) understand the unifying concepts of science understand and can successfully convey to students the unifying concepts of science delineated by the National Science Education Standards	No Mapping
1(c) understand important personal and technological applications understand and can successfully convey to students important personal and technological applications of science in their fields of licensure	No Mapping
1(d) understand research understand research and can successfully design, conduct, report and evaluate investigations in science	No Mapping
1(e) understand mathematics to process and report data understand and can successfully use mathematics to process and report data, and solve problems, in their field(s) of licensure	<b>Foundational Studies: IIIa. Quantitative Literacy</b>

#### 2. Nature of Science

Teachers of science engage students effectively in studies of the history, philosophy, and practice of science. They enable students to distinguish science from nonscience, understand the evolution and practice of science as a human endeavor, and critically analyze assertions made in the name of science. To show they are prepared to teach the nature of science, teachers of science must demonstrate that they:

Outcome	Mapping
2(a) understand historical and cultural development of science understand the historical and cultural development of science and the evolution of knowledge in their discipline	No Mapping
2(b) understand the philosophical tenets, assumptions, goals, and values understand the philosophical tenets, assumptions, goals, and values that distinguish science from technology and from other ways of knowing the world	No Mapping
2(c) engage students in studies of the nature of science engage students successfully in studies of the nature of science including, when possible, the critical analysis of false or doubtful assertions made in the name of science	<b>Foundational Studies: 2. Critically evaluate the ideas of others.</b>

### 3. Inquiry

Teachers of science engage students both in studies of various methods of scientific inquiry and in active learning through scientific inquiry. They encourage students, individually and collaboratively, to observe, ask questions, design inquiries, and collect and interpret data in order to develop concepts and relationships from empirical experiences. To show that they are prepared to teach through inquiry, teachers of science must demonstrate that they:

Outcome	Mapping
3(a) understand the methods of inquiry understand the processes, tenets, and assumptions of multiple methods of inquiry leading to scientific knowledge	No Mapping
3(b) engage students in inquiries engage students successfully in developmentally appropriate inquiries that require them to develop concepts and relationships from their observations, data, and inferences in a scientific manner	<b>Foundational Studies: IIIa. Quantitative Literacy</b>

### 4. Issues

Teachers of science recognize that informed citizens must be prepared to make decisions and take action on contemporary science- and technology-related issues of interest to the general society. They require students to conduct inquiries into the factual basis of such issues and to assess possible actions and outcomes based upon their goals and values. To show that they are prepared to engage students in studies of issues related to science, teachers of science must demonstrate that they:

Outcome	Mapping
4(a) understand socially important issues related to science understand socially important issues related to science and technology in their field of licensure, as well as processes used to analyze and make decisions on such issues	No Mapping
4(b) engage students in the analysis of problems engage students successfully in the analysis of problems, including considerations of risks, costs, and benefits of alternative solutions; relating these to the knowledge, goals and values of the students	No Mapping

### 5. General Skills of Teaching

Teachers of science create a community of diverse learners who construct meaning from their science experiences and possess a disposition for further exploration and learning. They use, and can justify, a variety of classroom arrangements, groupings, actions, strategies, and methodologies. To show that they are prepared to create a community of diverse learners, teachers of science must demonstrate that they:

Outcome	Mapping
5(a) vary teaching methods vary their teaching actions, strategies, and methods to promote the development of multiple student skills and levels of understanding	No Mapping
5(b) promote the learning of science by diverse students successfully promote the learning of science by students with different abilities, needs, interests, and backgrounds	No Mapping
5(c) organize and engage students in collaborative learning successfully organize and engage students in collaborative learning using different student group learning strategies;	No Mapping
5(d) use technological tools successfully use technological tools, including but not limited to computer technology, to access resources, collect and process data, and facilitate the learning of science	No Mapping
5(e) understand and build upon prior knowledge of students understand and build effectively upon the prior beliefs, knowledge, experiences, and interests of students	No Mapping
5(f) maintain a safe and supportive environment create and maintain a psychologically and socially safe and supportive learning environment	No Mapping

## 6. Curriculum

Teachers of science plan and implement an active, coherent, and effective curriculum that is consistent with the goals and recommendations of the National Science Education Standards. They begin with the end in mind and effectively incorporate contemporary practices and resources into their planning and teaching. To show that they are prepared to plan and implement an effective science curriculum, teachers of science must demonstrate that they:

Outcome	Mapping
6(a) understand curricular recommendations understand the curricular recommendations of the National Science Education Standards, and can identify, access, and/or create resources and activities for science education that are consistent with the standards	No Mapping
6(b) plan units of study plan and implement internally consistent units of study that address the diverse goals of the National Science Education Standards and the needs and abilities of students	No Mapping

## 7. Science in the Community

Teachers of science relate their discipline to their local and regional communities, involving stakeholders and using the individual, institutional, and natural resources of the community in their teaching. They actively engage students in science-related studies or activities related to locally important issues. To show that they are prepared to relate science to the community, teachers of science must demonstrate that they:

Outcome	Mapping
7(a) relate science to the community identify ways to relate science to the community, involve stakeholders, and use community resources to promote the learning of science	No Mapping
7(b) involve students in activities that relate science to the community involve students successfully in activities that relate science to resources and stakeholders in the community or to the resolution of issues important to the community	No Mapping

## 8. Assessment

Teachers of science construct and use effective assessment strategies to determine the backgrounds and achievements of learners and facilitate their intellectual, social, and personal development. They assess students fairly and equitably, and require that students engage in ongoing self-assessment. To show that they are prepared to use assessment effectively, teachers of science must demonstrate that they:

Outcome	Mapping
8(a) use multiple assessment tools and strategies use multiple assessment tools and strategies to achieve important goals for instruction that are aligned with methods of instruction and the needs of students;	No Mapping
8(b) use assessment results to guide instruction use the results of multiple assessments to guide and modify instruction, the classroom environment, or the assessment process	<b>Foundational Studies: IIIa. Quantitative Literacy</b>
8(c) use assessment results to engage students in self-analysis use the results of assessments as vehicles for students to analyze their own learning, engaging students in reflective self-analysis of their own work	No Mapping

## 9. Safety and Welfare

Teachers of science organize safe and effective learning environments that promote the success of students and the welfare of all living things. They require and promote knowledge and respect for safety, and oversee the welfare of all living things used in the classroom or found in the field. To show that they are prepared, teachers of science must demonstrate that they:

Outcome	Mapping
---------	---------

9(a) understand the legal and ethical responsibilities  
understand the legal and ethical responsibilities of science teachers  
for the welfare of their students, the proper treatment of animals,  
and the maintenance and disposal of materials

No Mapping

9(b) know and practice proper techniques for the use of  
materials

know and practice safe and proper techniques for the preparation,  
storage, dispensing, supervision, and disposal of all materials used  
in science instruction

No Mapping

9(c) know and follow safety procedures

know and follow emergency procedures, maintain safety equipment,  
and ensure safety procedures appropriate for the activities and the  
abilities of students

No Mapping

9(d) treat all living organisms in an ethical manner

treat all living organisms used in the classroom or found in the field  
in a safe, humane, and ethical manner and respect legal restrictions  
on their collection, keeping, and use

No Mapping

## 10. Professional Growth

Teachers of science strive continuously to grow and change, personally and professionally, to meet the diverse needs of their students, school, community, and profession. They have a desire and disposition for growth and betterment. To show their disposition for growth, teachers of science must demonstrate that they:

### Outcome

### Mapping

10(a) engage in professional learning and leadership  
engage actively and continuously in opportunities for professional  
learning and leadership that reach beyond minimum job  
requirements

No Mapping

10(b) reflect upon teaching  
reflect constantly upon their teaching and identify ways and means  
through which they may grow professionally

No Mapping

10(c) improve teaching and facilitate professional growth  
use information from students, supervisors, colleagues and others  
to improve their teaching and facilitate their professional growth

No Mapping

10(d) foster positive relationships  
interact effectively with colleagues, parents, and students; mentor  
new colleagues; and foster positive relationships with the community

No Mapping
